

# Analyzing and visualizing the data

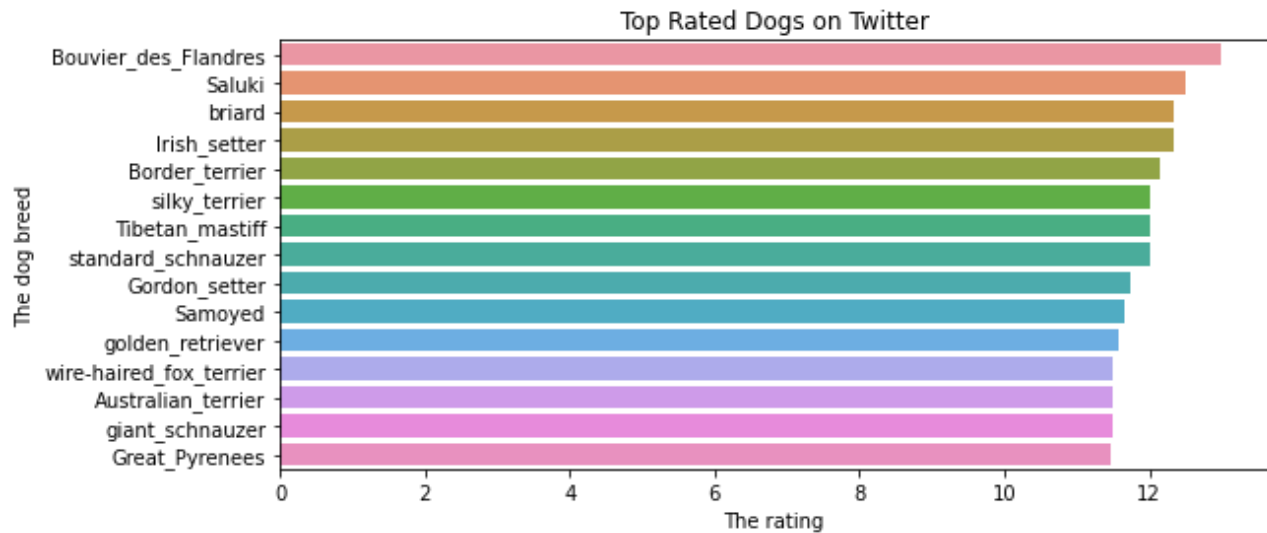

---

WeRateDogs: is a very awesome wholesome twitter account that is all about dogs and their looks and rating them, this page provided such good data it was easy to deal with and needed some cleaning process but it wasn't that hard.

when i first saw the data and the columns i asked myself if i want to buy a dog i'd like to have the highest rating dog because then i'd have one of the best dogs and i was able to do that with the provided data

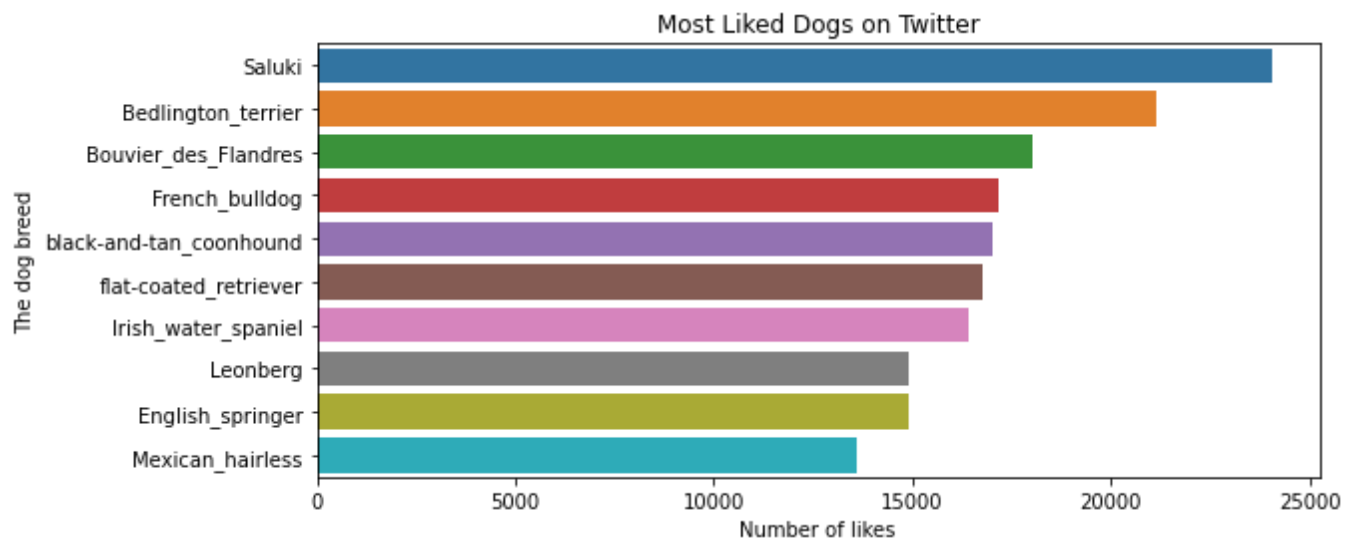

## 1-Top rated dogs

I analyzed more than 1500 tweets to be able to build a visualization like this one and answer that question, and the top rated dogs are bouvier des flandres and saluki these are awesome breeds

## 2- Most liked dog

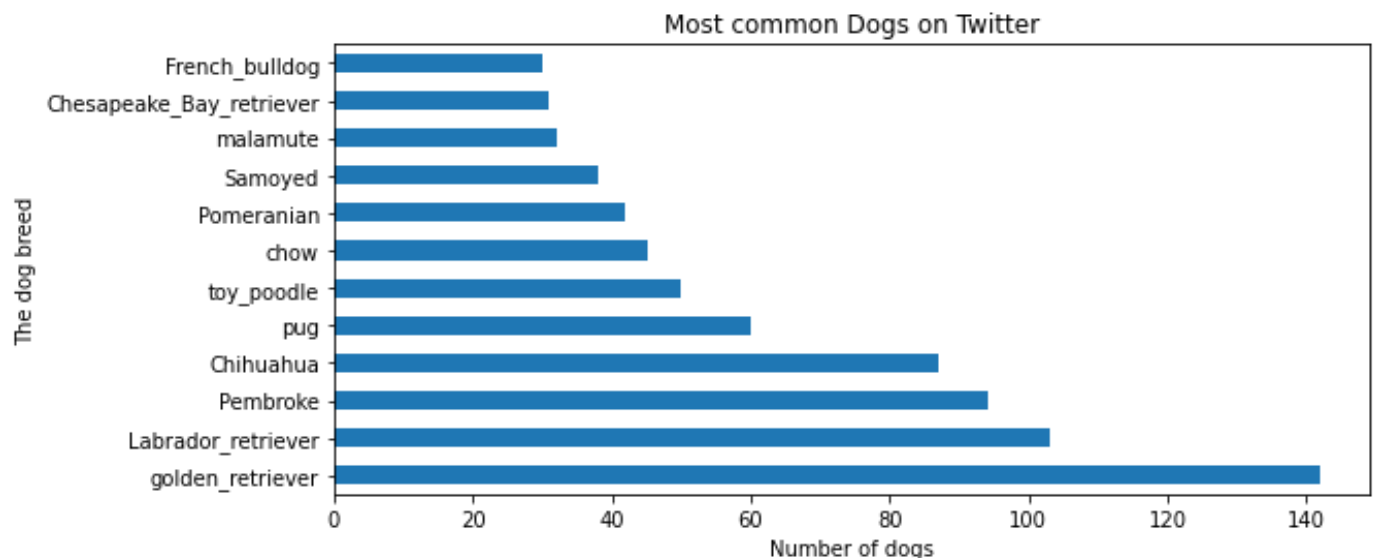

When i did the previous analysis i thought about that it might be a bit biased that the dog owners or the admins will give high ratings to their dogs because they love them so i built this analysis which is the most liked dogs now the followers are the ones deciding the rating

saluki and bouvier des Flandres were top 3 also

### 3-Most common dog to have

After making the previous analysis the top three dogs cost a fortune to get one so i did some analysis and found out they are also rare and getting them is not that easy, so i asked myself what are the most common dogs to find ?

Looks like golden retrievers are and they are quite cute
